were developed for more efi-•cient editing of plant genomes, including gene knockout, genomic deletion, disruption of cis-regulatory elements, gene knockin, and suppression of virus infection (Tables 1 and 2). sgRNA Expression Cassettes A typicalsgRNA contains 98nucleotides (includinga20-nttarget sequence) and functions as a guide in the Cas9/sgRNA nuclease complex (Nishimasu et al., 2014 ...

6 7 This will be used as a basis to create a fully integrated UK plant phenotyping infrastructure, which will then be able to participate in EMPHASIS as a

### **Gene Editing in Plants - GARNet community**

The CRISPR/Cas9 system can be used for several purposes in addition to genome editing, e.g., the ectopic regulation of gene expression, which can provide useful information about gene functions and can also be used to engineer novel genetic regulatory circuits for synthetic biology applications. The external control of gene expression typically relies on the use of inducible or repressible ...

### **The CRISPR/Cas9 system for plant genome editing and beyond**

The exciting field of genome editing is rapidly advancing and precise genome editing techniques have already become an important tool for both fundamental research and plant biotechnology. This collection includes both invited reviews and unsolicited research covering all aspects of genome editing technologies as applied to plant research (both for crop plants and model organisms).

### **Plant Genome Editing - BioMed Central**

Download PDF ReadCube ... The forte of gene editing in plants including crops has been radically changed by CRISPR-Cas9 technology. Exploring the fundamental biology of plant development and stress response will facilitate in designing elite and superior crops. The CRISPR-Cas9 holds a very promising future in making designer plants by taking only the gene of interest from a wild type species ...

Gene-editing and plants & animals used in food production: some technical, socio-economic and legal aspects Hearing on "New Techniques for Plant Breeding" - Committee on Agricultural and Rural Development of the European Parliament, 1 December 2015 Christoph Then, Testbiotech, [info@testbiotech.org](mailto:info@testbiotech.org), [www.testbiotech.org](http://www.testbiotech.org) There has been much debate for several years now on new methods of ...

## **Gene-editing and plants & animals used in food production**

CRISPR-Cas9 is a gene editing technology that uses a combination of (1) an enzyme that cuts DNA (Cas9, a nuclease) and (2) a guiding piece of genetic material (guide RNA) to specify the location in the genome.

the genes of yeast, plants, mice, rats, pigs, and primates. While some have welcomed these technologies, others believe they raise serious ethical issues, particularly when used in human embryos. In this paper we examine some of the ethical objections that have been raised against germline gene editing. We distinguish between objections that centre on the use of human embryos for gene editing ...
